1. Introduction

House Hunt is a web-based real estate platform designed to help users search, compare, and shortlist residential and commercial properties. The system provides a user-friendly interface for buyers, renters, and property agents to interact efficiently.

2. Objectives

- Provide an easy property search experience.
- Enable property filtering based on location, price, and amenities.
- Allow property owners to list and manage properties.
- Ensure secure login and user authentication.
- Provide responsive design for mobile and desktop users.

3. System Modules

- User Module – Registration, login, property search, shortlist properties.
- Admin Module – Manage users and property listings.
- Property Owner Module – Add, edit, delete properties.
- Search & Filter Module – Advanced search functionality.

4. Technology Stack

Frontend: HTML, CSS, JavaScript

Backend: Python / Node.js

Database: MySQL

Tools: VS Code, GitHub

5. Conclusion

House Hunt simplifies the process of buying and renting properties by providing a centralized digital platform. The project demonstrates practical implementation of web development technologies and database management systems.
